

POINT MUGU SEA RANGE EIS/OEIS

Availability of Final EIS/OEIS

The U.S. Navy has completed a Final Environmental Impact Statement/Overseas Environmental Impact Statement (EIS/OEIS) to assess potential environmental consequences associated with continuing military readiness activities and proposed increases in research, development, acquisition, testing, evaluation, and training activities in the Point Mugu Sea Range. These activities are consistent with previously analyzed activities and are similar to those that have occurred here for decades. The completion of the Final EIS/OEIS follows years of research, analysis, stakeholder and tribal engagement, and public involvement. The National Marine Fisheries Service is a cooperating agency for the preparation of this EIS/OEIS.

Concurrent with the National Environmental Policy Act public involvement process, the Navy engaged with consulting and interested parties in the National Historic Preservation Act Section 106 process regarding potential effects on historic properties.

Public Involvement

The Navy is committed to keeping the public informed and obtained public input at several stages during the environmental planning process. The Final EIS/OEIS includes responses to public comments received on the Draft EIS/OEIS. Regulations provide for a 30-day wait period after the Final EIS/OEIS is published before the Navy may take final action.

The Navy is committed to providing the public an accessible version of the Final EIS/OEIS. The document will be available beginning Jan. 7, 2022.

PROPOSED ACTION

The Proposed Action is to continue military readiness activities and increase testing and training activities that are the same as or similar to those currently occurring within the Point Mugu Sea Range.

The Proposed Action allows for continued testing and training in support of military readiness and Department of Defense mission requirements and to provide combat-ready forces.
